

# VIVOTEK NVR Beta Web UI

Better, Smoother, Still VIVOTEK

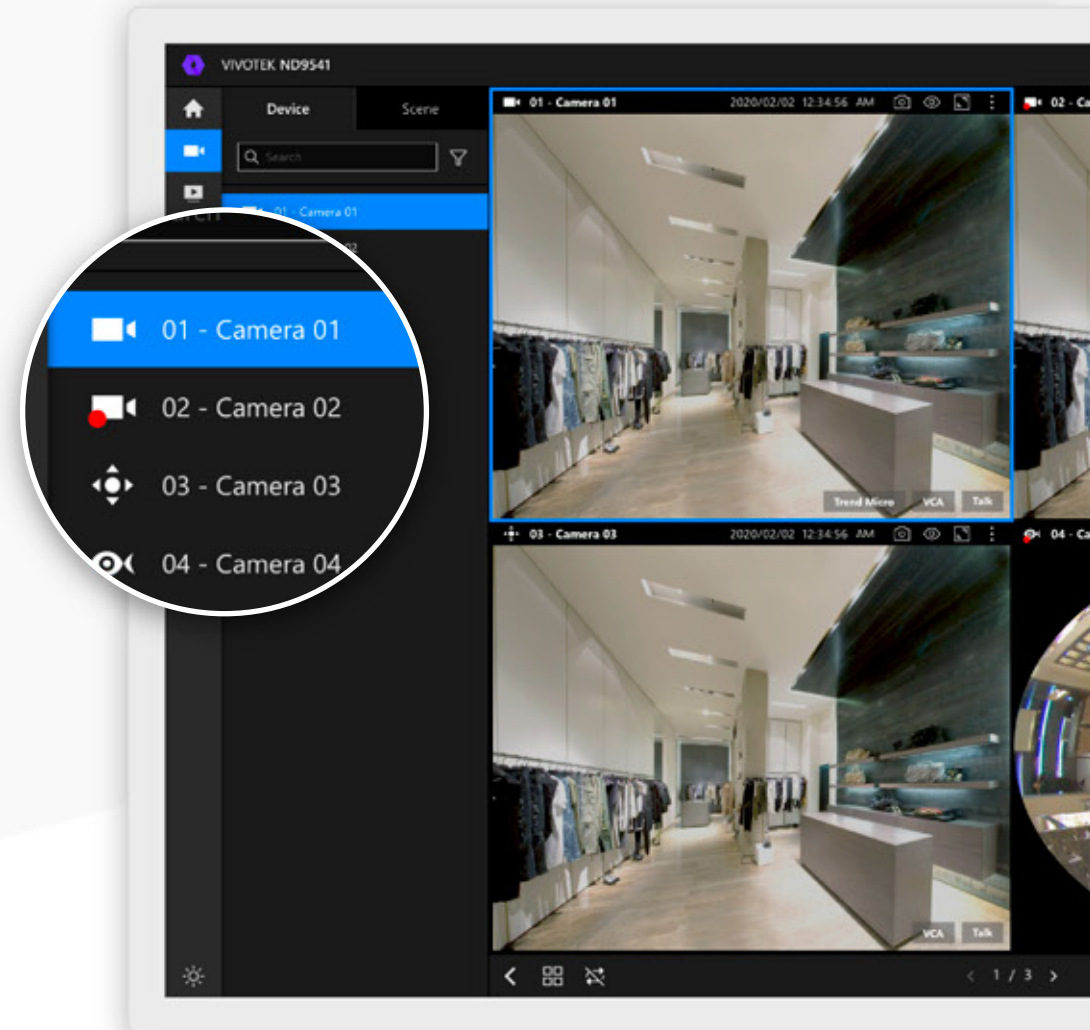

# New UI, Love It at First Glance

VIVOTEK has converted the NVR web UI to a software and browser look-alike with brand new design, allowing a more intuitive and smooth overall experience. The iconic Navigation Bar makes viewing and reaching the main access quick and simple, replicating the way you browse the internet every day.

# Quick-view of Camera Types

Adds graphic icons ahead of the list of camera names to enable at a glance recognition of camera type. This provides an intuitive interaction and saves the effort and time of clicking through cameras repeatedly to find a specific camera.

# Built-in, No More Plug-in

Actively adopting current trends and simultaneously protecting your cybersecurity, VIVOTEK's hassle-free new web UI was born. It supports diverse web browsers without the need for web plugins, allowing users to login and operate with ease and putting an end to problems related to system administrator authority, safety risks, browser and OS updates, and more.

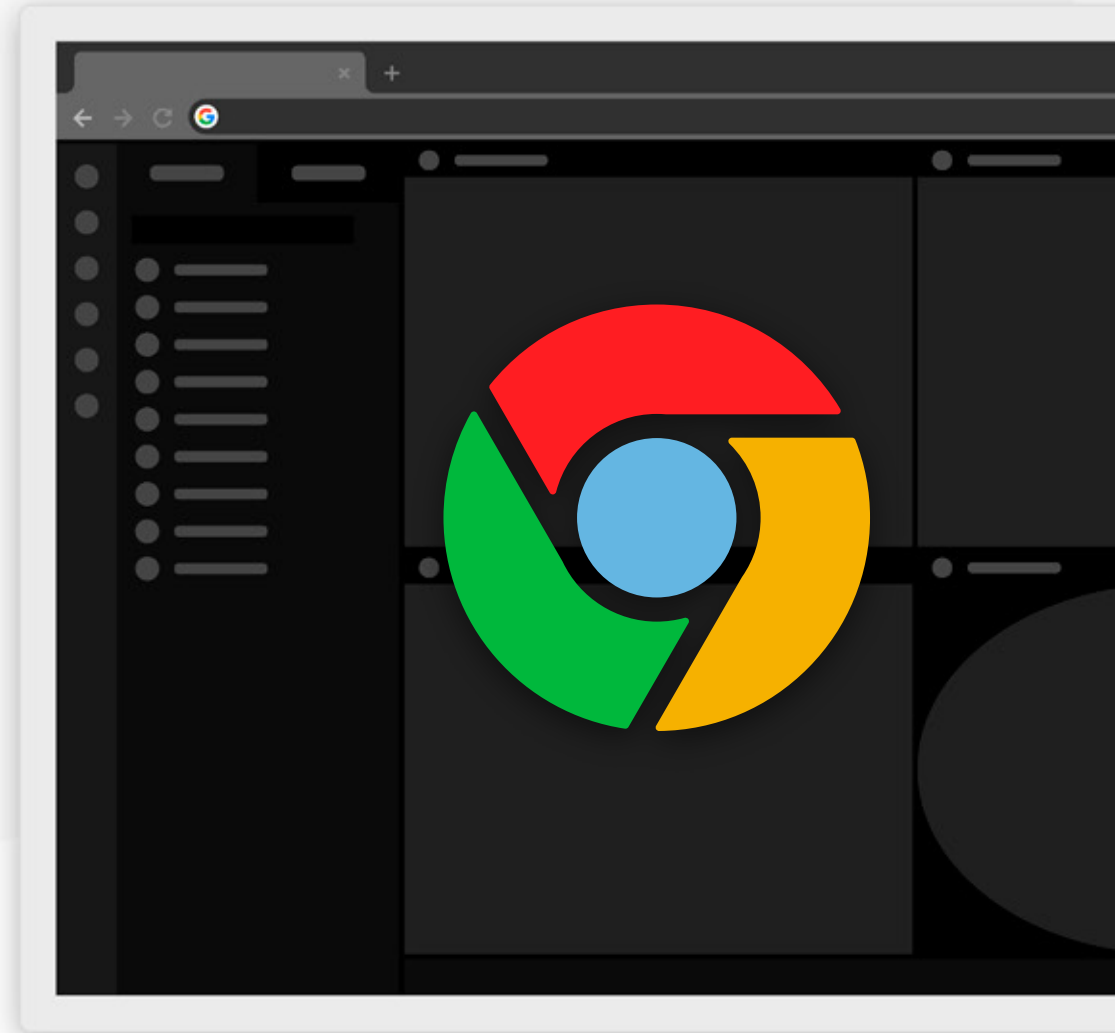

## See it all with your most used browser

VIVOTEK's new NVR web UI enables Chrome to help you discover more. You will never bother to switch browsers or windows for multitasks.

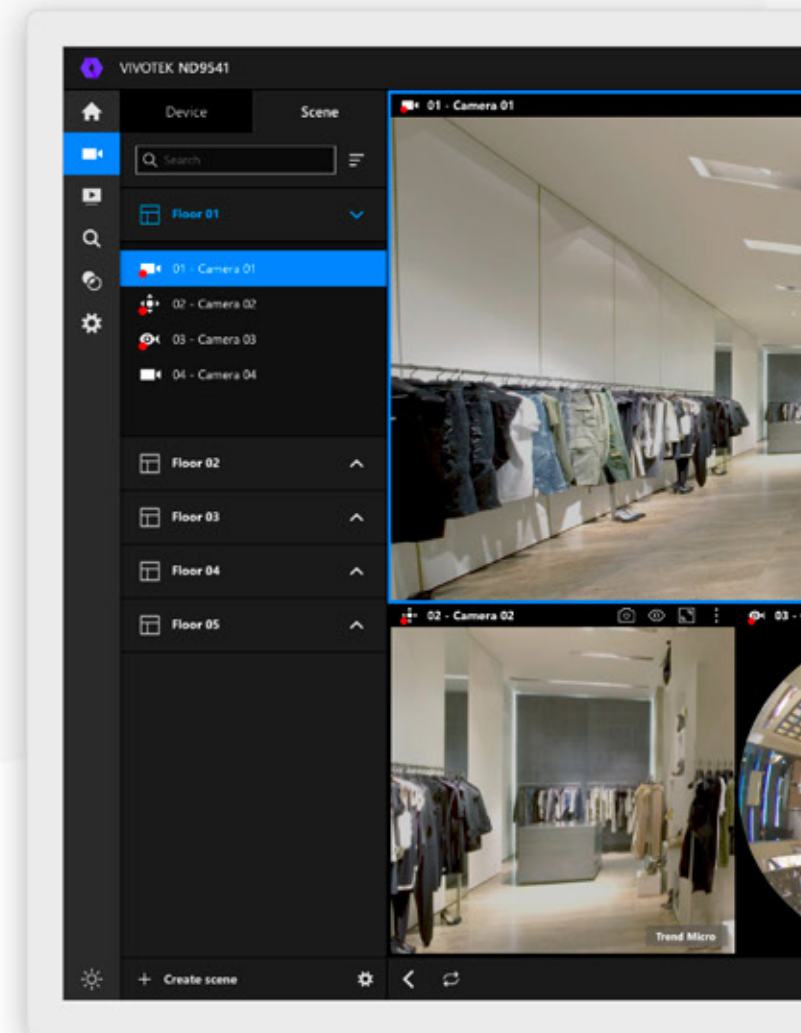

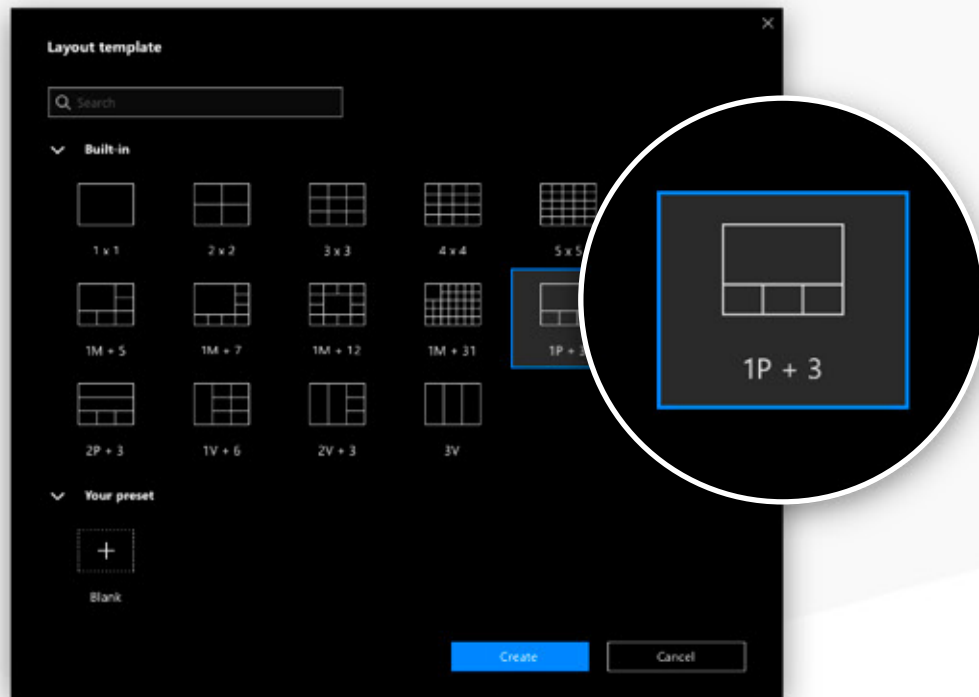

## Web plug-in free

With powerful features embedded, VIVOTEK helps you get the whole view, instead of getting the malware.

# Scene, a Highly Customizable Playlist Collection

This brand new feature brings remarkable accessibility and minimizes the limitation of the live video display. Users can design a collection of customized playlists with different layouts and various numbers of cameras to fulfill the needs of any scenario.

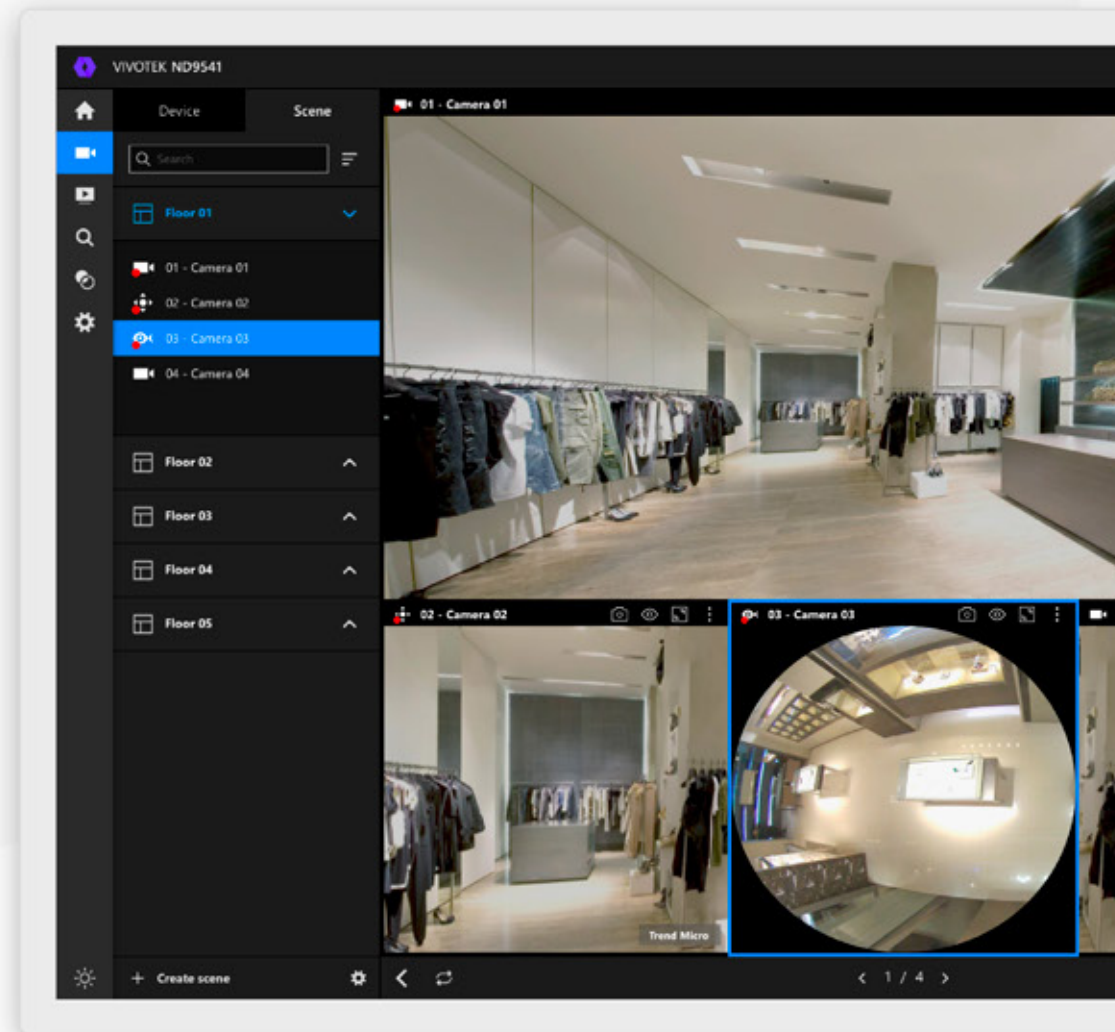

# Not Just a New Look

Redesigned and optimized features elevate the overall experience to a new level of power and discovery.

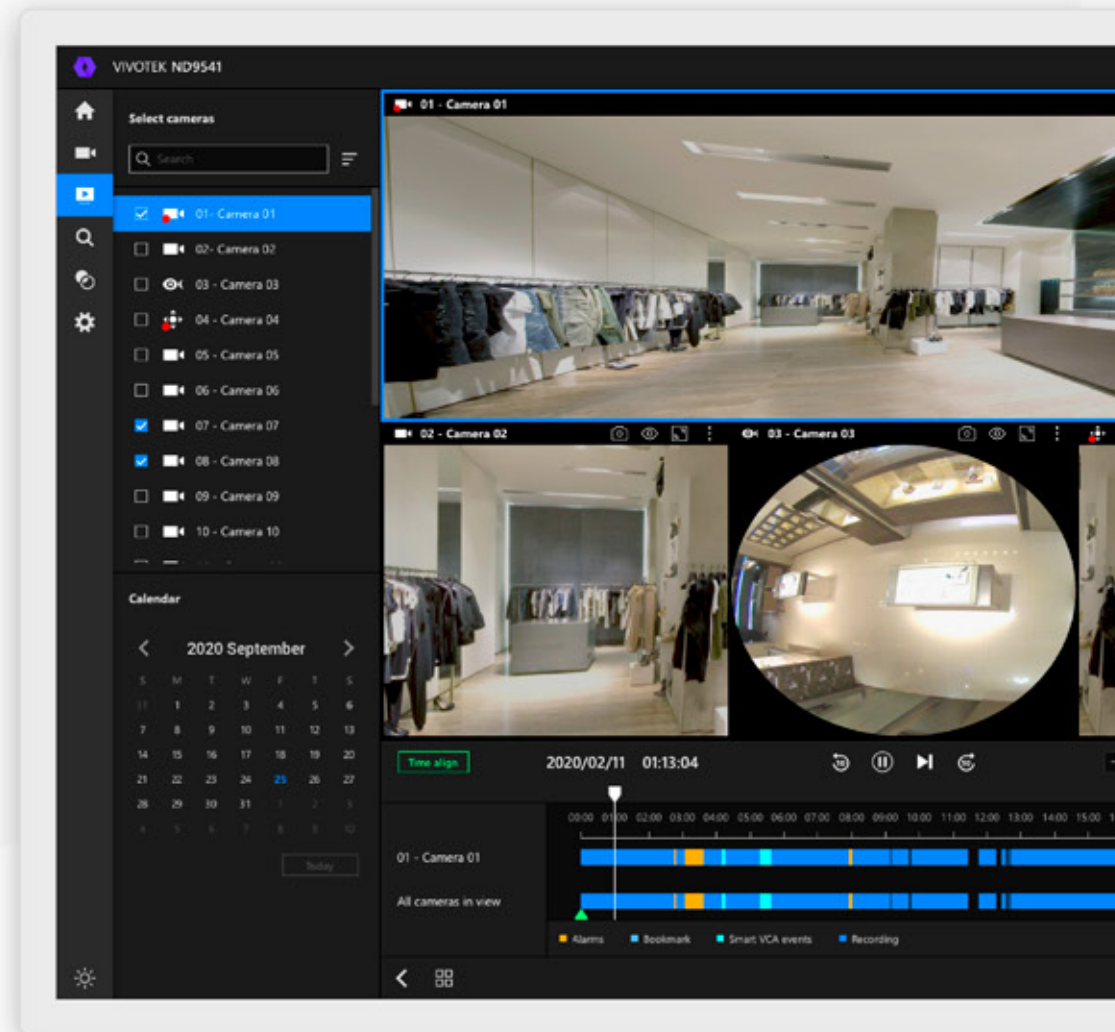

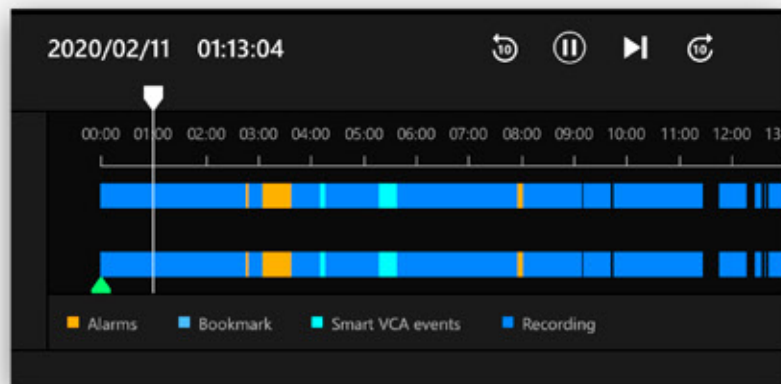

# Powerful Multi-live-view with 1 CH Fisheye Dewarp

VIVOTEK secures not only your safety but your pocket. Our NVR enables 4x4 multiple live view and equips the fisheye dewarp function in all models, while most brands in the market support very few live-view channels and dewarp in their premium series. Even the economy models can fully leverage VIVOTEK's cutting-edge technology and high-quality display.

# Dual Event Timeline with Alarm Indicator

Users can now look over and compare the alarm time via two bars showing the event time of the selected camera and the integration of all cameras respectively at the same time. Given the eye-catching colored indicators, the event occurrence time can be recognized effortlessly and immediately.

# And There Will **be More!**

The beta version of VIVOTEK's new web UI is now available in ND93/94 & ND94/95 series.  
Stay tuned. More features and upgrades will launch in the official release at 2021 Q1.
